Reduction in CO2 emissions.

**Nuclear Power** will help reduce carbon dioxide emissions in South Carolina. Building additional nuclear power will not only help meet our state's future energy needs, it will allow us to achieve a 21 percent reduction in emissions of carbon dioxide – a "greenhouse" gas – by the year 2020. That's another reason nuclear power is an essential part of the mix for fueling South Carolina's energy needs. To learn more about why SCE&G and Santee Cooper have teamed up to build two nuclear generating plants to meet the energy needs of our customers, visit [www.scnuclear.com](http://www.scnuclear.com).
