What's the best option for meeting
South Carolina's long-term energy needs?

Nuclear Power is an essential part of the mix for fueling South Carolina's energy needs. There is no single solution to the challenge of ensuring a sustainable energy future for our state. However, nuclear power, along with conservation and alternative forms of generation (like solar and wind), can help provide a diversified group of resources for meeting South Carolina's future energy needs. To learn more about why SCE&G and Santee Cooper have teamed up to build two nuclear generating plants to meet the energy needs of our customers, visit www.scnuclear.com.
